Technologies to Measure Nature

March 2025

Climate Risk and Soil Health Intelligence Technology for Natural Capital Monitoring at Scale

Natural Capital refers to the world's stock of natural resources.
Soil, air, water and habitats which underpin supply chains, economies and society.

SENUM VALUE PROPOSITION

Climate risk and soil health intelligence technology

Senus is a **climate risk and soil health intelligence** technology provider delivering robust Measurement, Reporting and Verification (MRV) solutions for natural capital across the land-use sector.

The technology enables our clients to quantify, monitor, and report climate and nature related risks, opportunities and impacts linked to soil health, soil carbon, biodiversity, and water systems.

*Unlocking
Productivity Gains
And Reducing
Environmental and
Operational Risks in Our
Clients Supply Chains
With Proprietary
Senus Technology for:*

Financial Institutions

Corporations

Governments

State Agencies

Landowners

Farmers

KEY MARKETS

We Aim to Provide **Mission Critical Technology** to a Range of High Value Clients

Financial Institutions

The Problem We Solve

Banks need to quantify environmental risk in their land and agriculture portfolios as they face a compounding set of consequences:

- Regulatory reporting obligations,
- Capital buffer challenges due to risk impacting shareholder returns,
- Reputational exposure and fines.

Agri Corporates

The Problem We Solve

We enable Agri-corporates to evidence environmental performance across their supply chains as they face growing exposure on multiple fronts:

- Regulatory non-compliance,
- Loss of market access,
- Exclusion from sustainable finance instruments such as green interest rates
- Vulnerability to supply disruption from unmanaged environmental risk.

Ecosystem Restoration

The Problem We Solve

We enable collection and processing of credible, standardised environmental data at the asset and landscape level, that if absent restoration projects will continue to struggle to:

- Attract private capital,
- Satisfy regulatory scrutiny
- Generate the high-integrity nature credits that emerging markets require.

CUSTOMER PROFILE

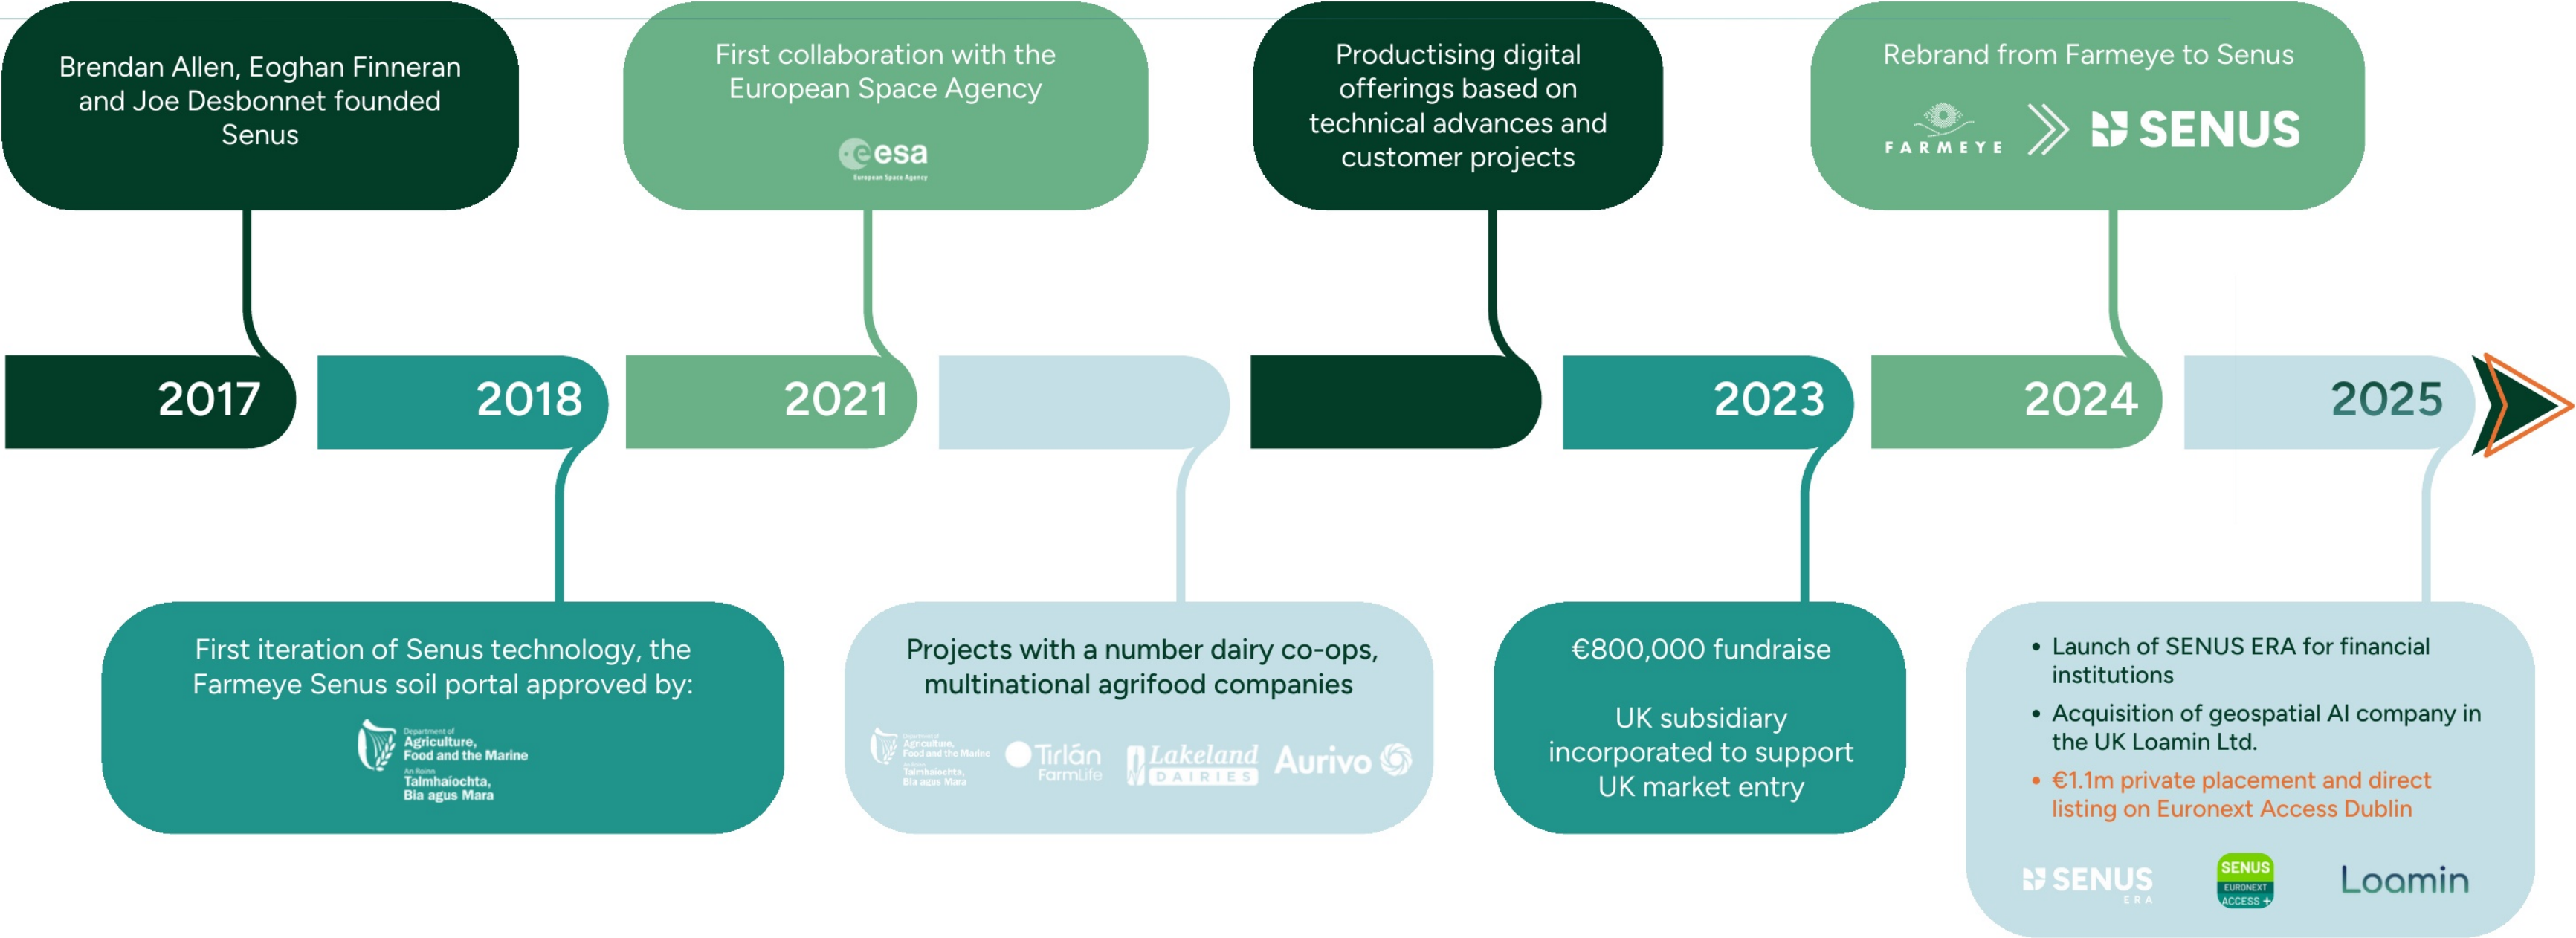

Producing Technology Solutions Enabling Growth in Use Cases and Addressable Market

Senus is an early mover with a growing reputation in the Natural Capital market and an eight-year track record of delivery for a portfolio of early marquee customers principally in Agriculture & Food, in Europe.

SENUM EVOLUTION

Eight Year History of Innovation and Commercialising Natural Capital Solutions

OUR SOLUTIONS

Technical Innovation - Evolving With Demand

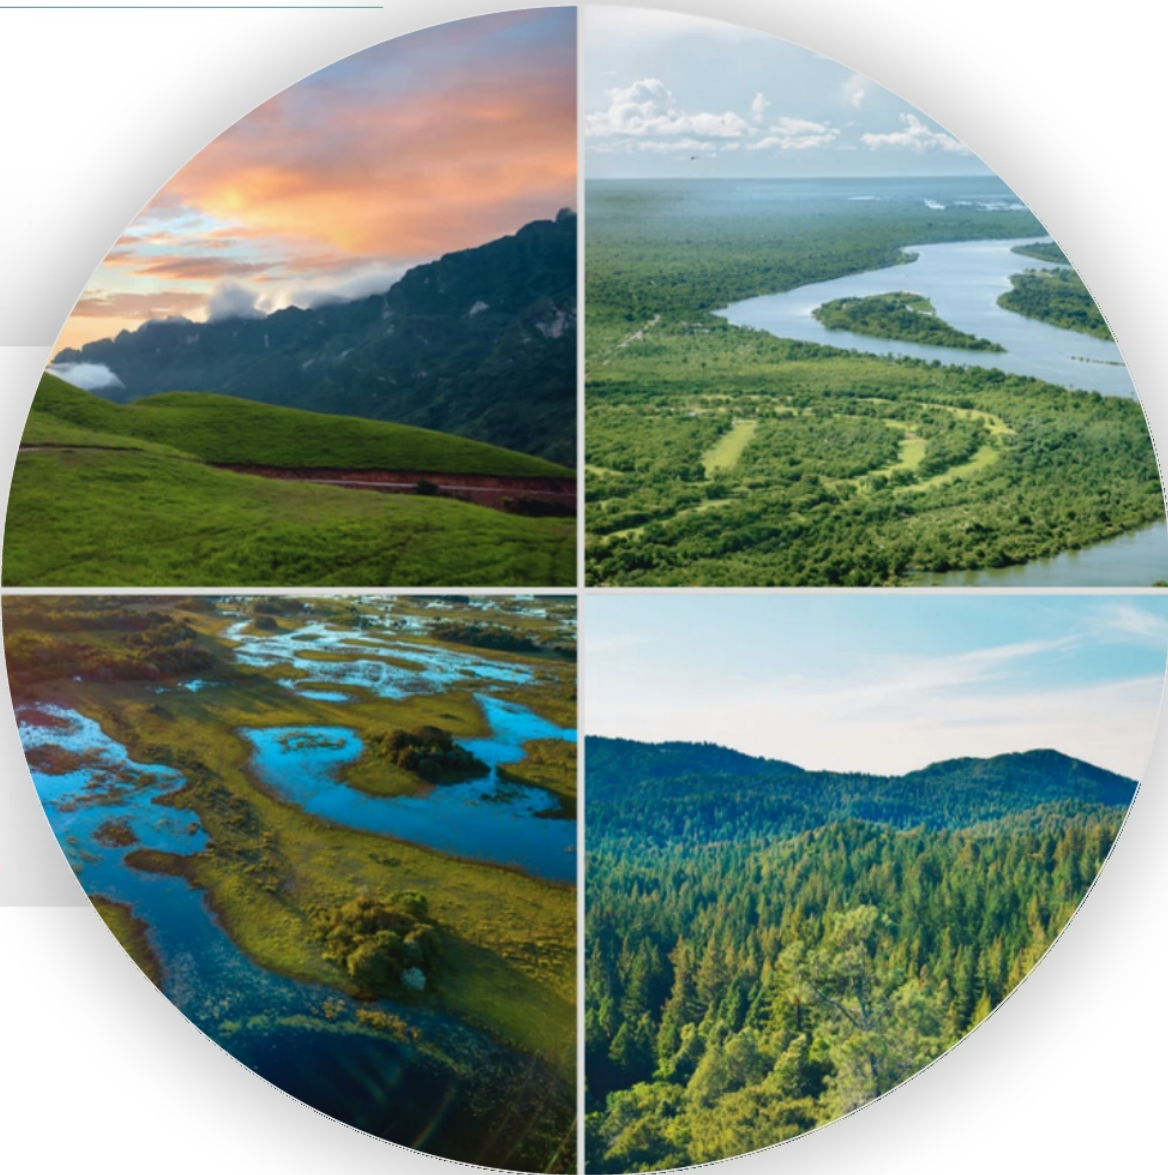

Annual subscriptions by usage / per farm

Environmental Reporting Assistant automating measurement, reporting and verification of climate risk within loan books or supply chains for financial institutions and corporations

Annual subscriptions by usage / per hectare

Enables the digitisation of soil heath programmes and the development of large-scale soil health datasets, typically supporting agronomists and land managers on soil health reporting

Biodiversity

Soil Health

Soil Carbon

Water Quality

SENUM COMMERCIAL MODEL

Scalable Business Models Aligned to Productised Solutions and Client Requirements

PRIMARY MODEL

Subscription

Pay Per Use

Rolls Annually

The majority of Sensus solutions are designed to be distributed as annual technology subscriptions. With a pay per use model that facilitates scale and growth in client contracts.

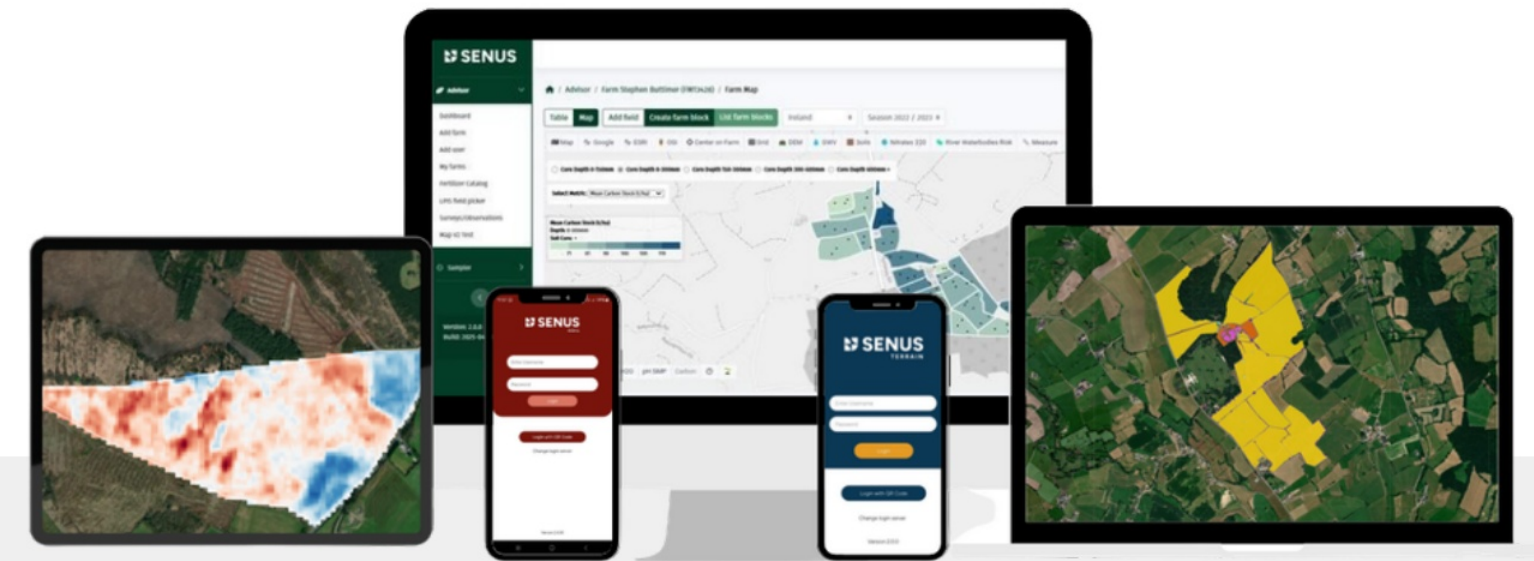

SECONDARY MODEL

Project Defined

Project Fee

Reveiwed Annually

A secondary approach for clients with fixed annual budgets is to conduct projects annually with agreed boundaries and timelines.

All customers engage with Sensus Technology to deliver project success.

M&A EXECUTION | LOAMIN INTEGRATION

Increasing level of engagement with clients due to integration of Loamin geospatial technologies into Senus solutions

Faster Development

AI processes have been embedded and core tech development has seen a major boost in productivity.

Better Market Offering

Measurement at scale can be 10x more affordable using a combination of Senus x Loamin technology

Wider Market Reach

Loamin technology integrated with Senus opens more global markets (i.e. the US, Africa)

Adding Gobal Leading Personnel to Senus Senior Management

EXPANDING ADDRESSABLE MARKET

Significant Market Opportunity for Natural Progression of Senus' Solutions and Activities.

Customer Evolution

- Focus on **growing Enterprise customer base** (from 36 accounts in FY2025).
- **Growth in value of engagements with Enterprises** (from ACV €12,309 in Soil and €58,900 in ERA in FY2025).
- **International growth target** (from 22% of sales in FY2025).

Priority Market Expansion

Financial Institutions	Ireland - UK - EU - Asia
Agriculture & Food	Ireland - UK - EU - US
Ecosystem Restoration	Ireland - UK - EU

Senus ERA, servicing the requirements of **financial institutions** which provide capital to land-use industries, extending Senus' addressable market into Finance & Capital Markets.

**Grow sales of Senus' Natural Capital solutions
at a compound annual growth rate of no less than 50% (2026 – 2030)**

Enterprise base of more than **100 customers** in FY2030 (36 FY2025)

Annual Contract Value with Enterprise Customers of **more than €50,000** in FY2030

Generate less than **50% of revenue from Ireland** by end FY2030 (78% FY2025)

EBITDA Positive During FY2028

By 2030 Senus will service an **internationally** diverse, **high value** and **high urgency** client base as a category leader in **mission critical** climate risk and soil health intelligence solutions with an opportunity for meaningful international scale.

GROWTH DRIVERS

Regulatory Pressure

- EU banking supervision requires climate risk integration into credit frameworks and stress testing
- CSRD* mandates sustainability disclosure for 50,000+ companies across operations and supply chains
- EU Taxonomy requires measurable evidence that economic activities are environmentally sustainable

Nature Risk

- New sustainability regulations require companies and financial institutions to measure and disclose biodiversity impacts supply chains.
- Investors increasingly integrate nature-related risks into investment decisions
- Biodiversity loss threatens soil health, ecosystem services, and agricultural productivity, creating financial risk for lenders and supply chains.

Physical Climate Risk

- Agriculture is highly exposed to climate volatility, soil degradation, biodiversity loss, and water stress
- These risks impact farm productivity, land values, and loan performance across portfolios
- Banks and corporates need asset-level intelligence to assess resilience across land and supply chains

Critical Data Gap

Despite regulatory and market pressure, financial institutions and Agri corporates lack standardised natural capital data at the farm/site level. This creates a strong demand for platforms that monitor natural capital data at scale.

*Corporate Sustainability Reporting Directive

INVESTMENT CASE

Early mover with a growing reputation in the Natural Capital market with 8 years of delivery

Significant, but nascent, market for **Natural Capital** technology solutions set for strong growth

Proprietary technology developed specifically for Natural Capital management

Abundance of new, and emerging, **legislative and regulatory drivers**, plus discretionary mandates

Large scale customers and large, multi-annual commercial contracts becoming accessible

Scalable technology subscription model with attractive economics

Leading, and aligned, industry management with clear mandate for growth

Opportunity to acquire complementary technologies, personnel and market positions
